Executive Summary

This report summarizes the findings of the Traffic Impact Study performed by Bowman Consulting (Bowman) for the proposed 4,989 SF Chick-fil-A development with 40 Car Stack Chick-fil-A development to be located at the Southwest corner of the intersection of Hugh Howell Rd and Rosser Terrace in the City of Tucker, Georgia.

Access to the site will be provided by (1) one right-in/left-out driveway along Rosser Terrace and (2) one full-access driveway along Dillard St.

The purpose of this study is threefold: (i) to determine the number of expected trips generated by the proposed site; (ii) to determine the potential impact, if any, of the proposed development on the surrounding roadway network; and (iii) to propose improvements to mitigate the impact of the proposed development, if required.

A Traffic Impact Analysis Methodology Statement was prepared and shared with representatives from the City of Tucker and the Georgia Department of Transportation.

Turning movement counts were collected for the morning and evening peak hours at the intersections of Hugh Howell Rd & Cowan Rd, Hugh Howell Rd & Rosser Terrace, Hugh Howell Rd & Tucker Industrial Rd, and Cowan Rd & Dillard St.

Based on the results of the trip generation assessment prepared by Bowman Consulting, the proposed development is expected to generate a total of 261 trips during the morning peak hour and 285 trips during the evening peak hour. It is anticipated that during the morning peak hour 128 of these are existing trips, the remaining 133 are expected to be primary trips. During the evening peak hour, it is anticipated that 143 are existing trips and 142 are new trips.

For the purposes of this analysis, it is anticipated that the proposed development will be constructed and fully operational by the year 2023.

The following scenarios were evaluated as part of this study: 2023 No Build, 2023 Build and 2023 Build with Improvements.

A Turn Lane Warrant Analysis was conducted based on the City of Tucker Code of Ordinances Sec. 22-284 - Access Management. The results show a right turn lane is warranted at the eastbound approach of the intersection of Hugh Howell Rd and Rosser Terrace under Existing, No Build and Build conditions. Based on discussion with the City of Tucker Traffic Review Staff, a southbound right turn lane on Rosser Terrace to access the site via Site Driveway 1 was requested to be included with the development of the project.

Capacity Analyses comparison No Build Vs Build conditions were conducted for the analysis intersections to identify areas impacted by the proposed development. The results indicate the following:

- During the morning peak hour: all intersections are projected to operate at an acceptable overall LOS B or better during the No Build and Build conditions. No changes in LOS and minimal increases in delays are expected on all approaches of the analysis intersections.
- During the evening peak hour: all intersections are projected to operate at an acceptable overall LOS C or better during the No Build and Build conditions. The intersection of Hugh Howell Rd with

Cowan Rd is expected to operate at LOS B under No Build conditions and LOS C under Build conditions, with an increase in delay of 3.7 seconds.

The following improvements for the signalized intersection of Cowan RD and Hugh Howell Rd were evaluated in order to verify the effectiveness of possible proposed improvements.

- **Improved Signal Optimization:** Optimize signal timings at Intersection of Hugh Howell Rd & Cowan Rd for evening Peak Hour.
- **Improved LT:** Provide a Northbound Left turn lane at the intersection of Hugh Howell Rd & Cowan Rd.
- **Improved RT CH:** Provide a channelized Northbound Right-turn Lane at the intersection of Hugh Howell Rd & Cowan Rd.

Capacity Analyses comparison No Build Vs Build Improved conditions were conducted to evaluate the proposed improvements. The results indicate the following:

- During the morning peak hour: The intersection of Hugh Howell Rd and Cowan Rd/The Centre Driveway is expected to experience acceptable overall LOS A under Build Improved conditions with minimal increase in the overall delay overall delay considering a northbound channelized right turn lane improvement. The northbound approach is anticipated to operate at LOS E under both No Build and Build Improved conditions with no increase in delay. All other approaches and turning movements are expected to maintain the existing LOS.
- During the evening peak hour: During the evening peak hour, the intersection of Hugh Howell Rd and Cowan Rd/The Centre Driveway is expected to experience acceptable overall LOS B under Build Improved conditions with minimal increase in the overall delay considering a northbound channelized right turn lane improvement. The northbound approach is anticipated to operate at LOS E under both No Build and Build Improved conditions with no increase in delay. All other approaches and turning movements are expected to maintain the existing LOS.

The 95th% queue results show that, during the morning peak hour, no storage lengths are exceeded with the inclusion of the proposed development. During the evening peak hour, the storage length of the southbound left-turn lane of the intersection of Hugh Howell Rd & Cowan Rd/The Centre Driveway is expected to be exceeded under No Build, Build and Build Improved conditions. The westbound left-turn lane of the intersection of Hugh Howell Rd & Tucker Industrial Rd is expected to be exceeded under both No Build and Build conditions, with no increase in queue length under Build conditions.

Based on the results of the capacity, queuing and turn lane warrant analysis the following improvements are proposed:

- Provide a southbound right-turning lane at the intersection of Rosser Terrace & Site Driveway 1.
- Provide a northbound right-turn flare at the intersection of Hugh Howell Rd & Rosser Terrace.
- Provide a Northbound Right turn lane at the intersection of Hugh Howell Rd & Cowan Rd.

Based on the results of the capacity, turn lane, and queueing analysis, the proposed Chick-Fil-A at 4431 Hugh Howell Rd, Tucker, GA is not expected to adversely impact the surrounding roadway network provided the proposed improvements mentioned on this report.

1. Introduction

This report summarizes the findings of the Traffic Impact Study performed by Bowman Consulting (Bowman) for the proposed Chick-fil-A development to be located at the Southwest corner of the intersection of Hugh Howell Rd and Rosser Terrace in the City of Tucker, Georgia.

The purpose of this study is threefold: (i) to determine the number of expected trips generated by the proposed site; (ii) to determine the potential impact, if any, of the proposed development on the surrounding roadway network; and (iii) to propose improvements to mitigate the impact of the proposed development, if required.

2. Background Information

The proposed development entails a 4,989 SF Chick-fil-A development with 40-Car Stack to be constructed at 4431 Hugh Howell Rd, in the City of Tucker, Georgia. **Figure 1** depicts the site location.

Figure 1. Site location.

Access to the development will be provided by (1) one right-in/left-out driveway along Rosser Terrace and (2) one full-access driveway along Dillard St, no access driveways are proposed on Hugh Howell Rd. The latest Concept Plan is presented in **Appendix A**.

Traffic Impact Analysis Methodology

A Traffic Impact Analysis Methodology Statement was prepared and shared with representatives from the City of Tucker and the GDOT DeKalb County Division. A copy of the approved Traffic Impact Analysis Methodology Statement and proof of the coordination is contained in **Appendix B**.

To assess the traffic operation at the study Intersections, the following tasks were undertaken:

- Turning movement counts were collected during an average weekday for the morning (7:00 AM - 9:00 AM) and evening (4:00 PM - 6:00 PM) peak periods.
- Trip generation Assessment for Chick-Fil-a (CFA) facilities.
- Trip Distribution for the proposed development.
- Capacity and queuing analyses at study intersections.

3. Roadway Network

Hugh Howell Rd (GA 236): Within the identified study area is a State-maintained four-lane Minor Arterial according to the Georgia Department of Transportation State Functional Classification Map Online. Hugh Howell Rd has a continuous two-way left-turn lane (TWLTL), a southeast-northwest alignment and a posted speed limit of 45 miles per hour.

Rosser Terrace: Within the identified study area is a city-maintained two-lane undivided roadway identified as a Local Road according to the City of Tucker 2019, Strategic Transportation Master Plan. Rosser Terrace has a north-south alignment and a posted speed limit of 25 miles per hour.

Tucker Industrial Rd: Within the identified study area is a city-maintained two-lane undivided roadway identified as a Local Road according to the City of Tucker Strategic 2019, Transportation Master Plan. Tucker Industrial Rd has a north-south alignment with a posted speed limit of 35 miles per hour.

Cowan Rd: Within the identified study area is a city-maintained two-lane undivided roadway identified as a Local Road according to the City of Tucker 2019, Strategic Transportation Master Plan. Cowan Rd has a northeast-southwest alignment with a posted speed limit of 25 miles per hour.

Dillard St: Within the identified study area is a city-maintained two-lane undivided roadway identified as a Local Road according to the City of Tucker 2019, Strategic Transportation Master Plan. Dillard St has a north-south alignment with a posted speed limit of 25 miles per hour.

Intersection Characteristics

1. Intersection of Hugh Howell Rd and Rosser Terrace/Fuller Way

This intersection is currently a four-legged unsignalized intersection where Hugh Howell Rd has a southeast-northwest alignment and Rosser Terrace and Fuller way have a north-south alignment.

The northwest approach (Hugh Howell Road eastbound) consists of an exclusive through lane, one shared through/right-turn lane and a continuous TWLTL. The southeast approach (Hugh Howell Road westbound) consists of two exclusive through lanes, one exclusive right-turn lane and a continuous TWLTL. The northbound approach (Rosser Terrace) consists of one shared left-turn/through/right-turn lane. The southbound approach (Fuller Way) consists of one shared left-turn/through/right-turn lane.

2. Intersection of Hugh Howell Rd and Cowan Rd/The Centre Driveway

This intersection is currently a four-legged signalized intersection where Hugh Howell Rd has a southeast-northwest alignment and Cowan Rd has a northeast-southwest alignment.

The northwest approach (Hugh Howell Road eastbound) consists of one exclusive left-turn lane, one exclusive through lane, and one shared through/right-turn lane. The southeast approach (Hugh Howell Road westbound) consists of one exclusive left-turn lane, two exclusive through lanes, and one exclusive right-turn lane. The southwest approach (Cowan Road Northbound) consists of one shared left-turn/through/right-turn lane. The northeast approach (Publix Driveway southbound) consists of one exclusive left-turn lane, and one shared through/right-turn lane.

3. Intersection of Hugh Howell Rd and Tucker Industrial Rd

This intersection is currently a four-legged signalized intersection where Hugh Howell Rd has an east-west alignment and Tucker Industrial Rd has a north-south alignment.

The eastbound and westbound approaches consist of one exclusive left-turn lane, one exclusive through lane, and one shared through/right-turn lane. The northbound and southbound approaches have one shared left-turn/through/right-turn lane.

4. Intersection of Cowan Rd & Dillard St

This intersection is currently a three-legged unsignalized intersection where Hugh Howell Rd has a northeast-southwest alignment and Dillard St has a north-south alignment.

The northeast approach consists of a single lane with left-turn and through movements allowed. The southwest approach consists of a single lane with through and right-turn movements allowed. The northbound approach consists of a single lane with left-turn and right-turn movements allowed.

Proposed Conditions

As mentioned before, access to the development will be provided by (1) one right-in/left-out driveway along Rosser Terrace and (2) one full-access driveway along Dillard St. No access is proposed on Hugh Howell Road.

4. Data Collection

For the purposes of this study the following data was collected:

- Inspections were conducted to obtain an inventory of existing roadway geometry, traffic control devices, and location of existing and proposed driveways.
- Published GDOT AADT counts and functional classification information.
- Turning movement counts were collected at the following intersections:
 - Hugh Howell Rd and Cowan Rd
 - Hugh Howell Rd and Rosser Terrace
 - Hugh Howell Rd and Tucker Industrial Rd
 - Cowan Rd & Dillard St

The traffic counts were completed during an average weekday, Tuesday, June 15, 2021, for the intersections of Hugh Howell Rd with Cowan Rd, Rosser Terrace, and Tucker Industrial Rd, and on Tuesday, March 1, 2022, for the intersection of Cowan Rd with Dillard St for the morning (7:00 AM - 9:00 AM) and evening (4:00 PM - 6:00 PM) peak periods. The turning movement counts are presented in **Appendix C**.

5. Traffic Forecast and Background Traffic

For the purposes of this analysis, it is anticipated that the proposed development will be constructed and fully operational by the year 2023. The following scenarios were evaluated as part of this study:

- Future Conditions (2023) without the proposed development (No Build)
- Future Conditions (2023) with the proposed development (Build)
- Improved Future Conditions (2023) with the proposed development (Build with Improvements)

To develop the 2022 and the 2023 traffic volumes, the first step was to determine a background growth rate applicable for the study area roadway segments. For each roadway segment, the annual growth rate was calculated using the historical AADT information provided by the GDOT Average Annual Daily Traffic & Historical Counts 2015-2019 information. A 0.5% minimum average annual growth rate was used for all traffic in the study area.

The historical study area roadway AADT information, as well as the applied growth rates utilized for the analysis, are presented in **Table 1**.

Table 1 Historical AADT and Annual Growth Rates

Roadway	From	to	2015	2016	2017	2018	2019	2016	2017	2018	2019	Avg Growth rate	Applied Growth rate
Hugh Howell Rd	Lawrenceville Hwy	Mountain Industrial Blvd	21,700	22,400	25,600	25,600	24,400	3.2%	14.3%	0.0%	-4.7%	3.2%	3.2%
Rosser Terrace	N/A	N/A	-	-	-	-	-	-	-	-	-	No Data	0.5%
Tucker Industrial Rd	N/A	N/A	-	-	-	-	-	-	-	-	-	No Data	0.5%
Cowan Rd	N/A	N/A	-	-	-	-	-	-	-	-	-	No Data	0.5%
Dillard St	N/A	N/A	-	-	-	-	-	-	-	-	-	No Data	0.5%

Source: GDOT Average Annual Daily Traffic & Historical Counts 2015-2019

The growth rates presented in **Table 1** were applied to the 2021 Turning Movement Counts to develop the 2022 Existing Volumes. The 2022 Existing Traffic Volumes are presented in **Appendix D, Exhibit 1**.

The 2023 No Build Traffic Volumes were developed applying one year growth to the 2022 Existing Traffic Volumes, see **Exhibit 2** in **Appendix D**.

6. Trip Generation

The applicant is proposing to develop the site with the following land uses generating site traffic:

- 4,989 SF Chick-fil-A Restaurant with drive-thru window (Proposed)

Considering Chick-fil-A fast-food restaurants generate larger number of trips than ITE comparable land uses. Bowman conducted a Trip Generation Assessment based on trip generation data provided by the Atlanta Department of Transportation for three similar Chick-fil-A facilities. The trip generation assessment is presented **Appendix E**.

Table 2 displays the trip generation for the proposed development and includes the morning and evening peak hour.

Table 2 Site Trip Generation

Land Use	Land Use Code ⁽¹⁾	AADT of Adjacent Street	Period	Peak Hour Trips ⁽²⁾			Pass by ⁽³⁾			Primary		
				In	Out	Total	In	Out	Total	In	Out	Total
Fast Food restaurant with Drive thru	934	24,400	AM	133	128	261	65	63	128	68	65	133
			PM	148	137	285	74	69	143	74	68	142

(1) Based on the Institute of Transportation Engineers Trip Generation, 10th Edition

(2) Based on Bowman 2021 Trip Generation Assessment for Chick-Fil-A facilities

(3) Pass-By rates of 49% were extracted from the Institute of Transportation Engineers Trip Generation Handbook, 3rd Edition

The proposed development is expected to generate a total of 261 trips during the morning peak hour and 285 trips during the evening peak hour. It is anticipated that during the morning peak hour 128 of these are existing trips, the remaining 133 are expected to be primary trips. During the evening peak hour, it is anticipated that 143 are existing trips and 142 are new trips.

7. Trip Distribution

The proposed trip distribution for the site was developed based on the AADT information of the surrounding roadway network, he population and employment centers in the area, and the access conditions of the site. The trip distribution for this site is presented in **Figure 2**.

Figure 2. Trip Distribution

The Primary and Pass-By trip distributions are presented in **Exhibits 3 and 4** in **Appendix D**.

The Primary and Pass-By trips are presented in **Exhibits 5 and 6** in **Appendix D**.

The CFA Site Trips are presented in **Exhibits 7** in **Appendix D**.

The CFA Site Trips were added to the 2022 No Build Traffic Volumes to yield the 2022 Build Traffic Volumes presented in **Exhibit 8** in **Appendix D**.

8. Turn Lane Warrant Analysis

A Turn Lane Warrant Analysis was conducted based on the City of Tucker Code of Ordinances. Per Sec. 22-284 - Access Management, a deceleration lane shall be required at each project driveway or subdivision street entrance, as applicable, that meets either the average daily traffic (ADT) or right turning volumes shown in **Table 3**.

Table 3 Right Turn Lane Warrant Criteria

Main Road Speed Limit	2 Lanes on Main Road		>2 Lanes on Main Road	
	35-40 mph	>40 mph	35-40 mph	>40 mph
Main Road ADT	8000	4000	12000	10000
Daily Right Turning Volume	150	75	150	75
Peak Hour Right Turning Volumes	15	7	15	7

For driveways, right-turn lanes shall be required at all driveways where the right-turning volume exceeds 300 vehicles per day.

The following number of entering right turns are anticipated under 2023 Build Conditions:

- Hugh Howell Rd and Rosser Terrace
 - AM Peak Hour - 16
 - PM Peak Hour - 33
- Rosser Terrace and Site Driveway 1
 - AM Peak Hour - 76
 - PM Peak Hour - 85

Based on the thresholds for a right-turn lane provided on the City of Tucker Code of Ordinances, a right turn lane is warranted at the eastbound approach of the intersection of Hugh Howell Rd and Rosser Terrace. Note the 7 right-turning vehicle per hour threshold from the City of Tucker Code of Ordinances for a 40 mph or higher speed limit roadway is already exceeded under Existing and No Build conditions.

Based on the posted speed limit of Rosser Terrace (25 mph) a right-turn deceleration lane is not warranted as the threshold is not applicable for roads with speed limits smaller than 35 mph. Based on discussion with the City of Tucker Traffic Review Staff, a southbound right turn lane on Rosser Terrace to access the site via Site Driveway 1 was requested to be included with the development of the project.

9. Capacity Analysis

The study intersections were analyzed for each scenario following the Highway Capacity Manual (HCM 6th edition) methodologies using the computer software Synchro 10. The analysis uses capacity, Level of Service, and control delay as the criteria for the performance of the driveways and study intersections.

Capacity, as defined by the HCM, is a measure of the maximum number of vehicles in an hour that can travel through an intersection or section of roadway under typical conditions. Level of Service (LOS) is a marker of the driving conditions and perception of drivers while traveling during the given time period. LOS ranges from LOS A which represents free flow conditions, to LOS F which represents breakdown conditions.

Table 4 shows the LOS for unsignalized intersections as defined by the HCM.

Table 4 HCM Level of Service Criteria

Level of Service (LOS)	Unsignalized Intersections	Signalized Intersections
	Average Control Delay (sec/veh)	Average Control Delay (sec/veh)
A	≤10	≤10
B	10 - 15	10 - 20
C	15 - 25	20 - 35
D	25 - 35	35 - 55
E	35 - 50	55 - 80
F	>50	>80

Control delay is a measure of the total amount of delay experienced by an individual vehicle and includes delay related to deceleration, queue delay, stopped delay, and acceleration.

Table 4 displays the amount of control delay (in seconds per vehicle) that corresponds to the LOS for signalized and unsignalized intersections.

Capacity Analysis Comparison – No Build vs Build Conditions (2023)

Capacity Analyses comparison were conducted for the No Build Vs Build conditions (2023). The primary purpose for this approach was to compare the results to identify areas impacted by the proposed development. The capacity results are included in **Appendix F**.

The capacity results for morning peak hour are summarized in **Table 5**.

Table 5 2023 AM Peak Hour Capacity Analysis

Extracted from Synchro HCM 6th Edition

Based on the results of the capacity analysis during the morning peak hour, all intersections are projected to operate at an acceptable overall LOS B or better during the No Build and Build conditions.

The northbound and southbound approaches of the intersection of Hugh Howell Rd and Cowan Rd are expected to operate at LOS E under both No Build and Build conditions. The northbound and southbound approaches of the intersection of Hugh Howell Rd and Tucker Industrial Rd are expected to operate at LOS E under both No Build and Build conditions. The eastbound and westbound left-turning movements of the intersection of Hugh Howell Rd with Tucker Industrial Rd are expected to operate at a LOS F during both No Build and Build conditions, minimal increases in delays are expected at the above-mentioned turning movements and approaches.

The capacity results for evening peak hour are summarized in **Table 6**.

4 Cowan Rd & Dillard St	Extracted from Synchro HCM 6th Edition					

Based on the results of the capacity analysis during the evening peak hour, all intersections are projected to operate at an acceptable overall LOS C or better during the No Build and Build conditions. An increase in delay of 3.7 seconds is expected at the intersection of Hugh Howell Rd with Cowan Rd under Build conditions.

The northbound and southbound approaches of the intersection of Hugh Howell Rd and Tucker Industrial Rd are expected to operate at LOS E under both No Build and Build conditions; the eastbound and westbound left-turning movements of the intersection of Hugh Howell Rd with Tucker Industrial Rd are expected to operate at LOS F during both No Build and Build conditions.

Proposed Improvements

Based on the results of the turn lane warrant analysis and the capacity analysis comparison between No Build and Build conditions, the following improvements are proposed:

- Provide a southbound right-turning lane at the intersection of Rosser Terrace & Site Driveway 1.
- Provide a northbound right-turn flare at the intersection of Hugh Howell Rd & Rosser Terrace.

Additionally, the following improvements for the signalized intersection of Cowan Rd and Hugh Howell Rd were evaluated in order to verify the effectiveness of possible proposed improvements.

- **Improved Opt:** Optimize signal timings at Intersection of Hugh Howell Rd & Cowan Rd for evening Peak Hour.
- **Improved LT:** Provide a Northbound Left-turn Lane at the intersection of Hugh Howell Rd & Cowan Rd.
- **Improved RT CH:** Provide a channelized Northbound Right-turn Lane at the intersection of Hugh Howell Rd & Cowan Rd.

Capacity Analysis Comparison – No Build vs Build Improved Conditions

A Capacity Analyses comparison was conducted for the No Build and Build Improved conditions (year 2023). The primary purpose for this approach was to compare the results in order to evaluate the effect of the proposed improvements. The capacity results are included in **Appendix F**.

The capacity results for morning peak hour are summarized in **Table 7**.

Table 7 2023 Morning Peak Hour Capacity Analysis Comparison No Build vs Improved Conditions

2023 CONDITIONS - (AM)			No Build		Build Improved LT		Build Improved RTch		
Intersection	Approach	Movement	DELAY (S)	LOS	DELAY (S)	LOS	DELAY (S)	LOS

Intersection			-	8.3	A	11.0	B	9.1	A

Extracted from Synchro HCM 6th Edition

During the morning peak hour, the intersection of Hugh Howell Rd and Cowan Rd/The Centre Driveway is expected to experience acceptable overall LOS A under Build Improved conditions with minimal increase in the overall delay considering a northbound channelized right turn lane improvement. The northbound approach is anticipated to operate at LOS E under both No Build and Build Improved conditions with no increase in delay. All other approaches and turning movements are expected to maintain the existing LOS.

The capacity results for evening peak hour are summarized in **Table 7**.

Table 8 2023 Evening Peak Hour Capacity Analysis Comparison No Build vs Improved Conditions

2023 CONDITIONS - (PM)			No Build		Build Improved Opt		Build Improved LT		Build Improved RTch

Extracted from Synchro HCM 6th Edition

During the evening peak hour, the intersection of Hugh Howell Rd and Cowan Rd/The Centre Driveway is expected to experience acceptable overall LOS B under Build Improved conditions with minimal increase in the overall delay considering a northbound right turn lane improvement. The northbound approach is anticipated to operate at LOS E under both No Build and Build Improved conditions with no increase in delay. All other approaches and turning movements are expected to maintain the existing LOS.

Queueing Analysis

The queue lengths were evaluated to determine if the available storage length of the turn lanes was exceeded. The 95th Percentile queue lengths are presented in **Appendix F. Table 9** summarizes the queue results.

Table 9 Queueing Analysis Comparison

2023 PM PEAK HOUR CONDITIONS			Available Storage (ft)	No Build		Build		Build Imp - Signal Opt		Build Imp - Left Turn		Build Imp - Right Turn

		NB	Approach	-	3	3	13	15							

Extracted from Synchro10 HCM 6th Edition

Intersections 3 & 4 have Non-NEMA Phasing therefore were extracted from Synchro10 HCM 2000 Edition

95th percentile volume exceeds capacity, queue may be longer.

m Volume for 95th percentile queue is metered by upstream signal.

For queue given in terms of vehicles one vehicle was assumed equal to 25 ft (Including space in between vehicles).

Based on the 95th% queue results, during the morning peak hour, no storage lengths are exceeded with the inclusion of the proposed development.

Based on the 95th% queue results, during the evening peak hour the storage length of the southbound left-turn lane of the intersection of Hugh Howell Rd & Cowan Rd/The Centre Driveway is expected to be exceeded under No Build, Build and Build Improved conditions. The westbound left-turn lane of the intersection of Hugh Howell Rd & Tucker Industrial Rd is expected to be exceeded under both No Build and Build conditions, with no increase in queue length under Build conditions.

10. Conclusions and Recommendations

Based on the results of the trip generation assessment prepared by Bowman Consulting, the proposed development is expected to generate a total of 261 trips during the morning peak hour and 285 trips during the evening peak hour. It is anticipated that during the morning peak hour 128 of these are existing trips, the remaining 133 are expected to be primary trips. During the evening peak hour, it is anticipated that 143 are existing trips and 142 are new trips.

The study found that based on the City of Tucker Code of Ordinances, a right turn lane is warranted at the eastbound approach of the intersection of Hugh Howell Rd and Rosser Terrace under Existing, No Build and Build conditions. Based on discussion with the City of Tucker Traffic Review Staff, a southbound right turn lane on Rosser Terrace to access the site via Site Driveway 1 was requested to be included with the development of the project.

The results of the No Build Vs Build conditions capacity analysis comparison indicate the following:

- During the morning peak hour:
All intersections are projected to operate at an acceptable overall LOS B or better during the No Build and Build conditions. No changes in LOS and minimal increases in delays are expected on all approaches of the analysis intersection.
- During the evening peak hour:
All intersections are projected to operate at an acceptable overall LOS C or better during the No Build and Build conditions.

The intersection of Hugh Howell Rd with Cowan Rd is expected to operate at LOS B under No Build conditions and LOS C under Build conditions, with an increase in delay of 3.7 seconds.

The following improvements for the signalized intersection of Cowan RD and Hugh Howell Rd were evaluated in order to verify the effectiveness of possible proposed improvements.

- **Improved Signal Optimization:** Optimize signal timings at Intersection of Hugh Howell Rd & Cowan Rd for evening Peak Hour.
- **Improved LT:** Provide a Northbound Left turn lane at the intersection of Hugh Howell Rd & Cowan Rd.
- **Improved RT CH:** Provide a channelized Northbound Right-turn Lane at the intersection of Hugh Howell Rd & Cowan Rd.

Capacity Analyses comparison No Build Vs Build Improved conditions were conducted to evaluate the proposed improvements. The results indicate the following:

- During the morning peak hour: The intersection of Hugh Howell Rd and Cowan Rd/The Centre Driveway is expected to experience acceptable overall LOS A under Build Improved conditions with minimal increase in the overall delay considering a northbound channelized right turn lane improvement. The northbound approach is anticipated to operate at LOS E under both No Build and Build Improved conditions with no increase in delay. All other approaches and turning movements are expected to maintain the existing LOS.
- During the evening peak hour: During the evening peak hour, the intersection of Hugh Howell Rd and Cowan Rd/The Centre Driveway is expected to experience acceptable overall LOS B under Build Improved conditions with minimal increase in the overall delay overall delay considering a northbound channelized right turn lane improvement. The northbound approach is anticipated to

operate at LOS E under both No Build and Build Improved conditions with no increase in delay. All other approaches and turning movements are expected to maintain the existing LOS.

The 95th% queue results show that, during the morning peak hour, no storage lengths are exceeded with the inclusion of the proposed development. During the evening peak hour, the storage length of the southbound left-turn lane of the intersection of Hugh Howell Rd & Cowan Rd/The Centre Driveway is expected to be exceeded under No Build, Build and Build Improved conditions. The westbound left-turn lane of the intersection of Hugh Howell Rd & Tucker Industrial Rd is expected to be exceeded under both No Build and Build conditions, with no increase in queue length under Build conditions.

Based on the results of the capacity, queuing and turn lane warrant analysis the following improvements are proposed:

- Provide a southbound right-turning lane at the intersection of Rosser Terrace & Site Driveway 1.
- Provide a northbound right-turn flare at the intersection of Hugh Howell Rd & Rosser Terrace.
- Provide a northbound right turn lane at the intersection of Hugh Howell Rd & Cowan Rd.

Based on the results of the capacity, turn lane, and queueing analysis, the proposed Chick-Fil-A at 4431 Hugh Howell Rd, Tucker, GA is not expected to adversely impact the surrounding roadway network provided the proposed improvements mentioned on this report.

APPENDIX A

APPENDIX B

TRAFFIC IMPACT STUDY CHICK-FIL-A, TUCKER, GA

SCOPING/METHODOLOGY STATEMENT

Scoping Meeting Date: Electronic Coordination

Applicant's Consultant: Bowman Consulting Group

Applicant's Contact information: Andrew J Petersen (321 -270 - 8987 / apetersen@bowman.com)
Daniela Jurado (321 -270 - 8977 / djurado@bowman.com)

(1) LOCATION OF PROPOSED PROJECT: 4431 Hugh Howell Rd, Tucker, GA 30084, See Figure 1.

Municipality: City of Tucker, GA

County DeKalb County

(2) DESCRIPTION OF PROPOSED PROJECT:

The proposed development comprises a 4,989 square feet Fast-food restaurant with drive-thru window with 44 car stack, located at 4431 Hugh Howell Rd in the city of Tucker, Georgia. Access to the development will be provided by one (1) full-access driveway along Rosser Terrace.

Trip generation rates were extracted from the Institute of Transportation Engineers 10th Edition. The trip generation is presented in **Table 1**. The proposed Trip Distribution is presented in **Figure 2**.

(3) PURPOSE OF THE ASSESSMENT:

The purpose for the study is threefold: to determine the number of trips generated by the proposed site; to determine the potential impact, if any, of the proposed development on the roadway network; to propose improvements, if required.

Capacity analyses will be prepared for the No Build, Build conditions, and Build Conditions with Improvements (if required). Turn lane warrant analyses will be completed at the intersection of Hugh Howell Rd and Rosser Terrace. The results of the study will be summarized in a report document with graphics and back up data.

(4) DEVELOPMENT SCHEDULE:

Anticipated Opening Date: 2022

Analysis Date: 2022

(5) STUDY INTERSECTIONS (See Figure 2):

- Hugh Howell Rd and Rosser Terrace (Unsignalized Intersection)
- Hugh Howell Rd and Tucker Industrial Rd (Signalized Intersection)
- Hugh Howell Rd and Cowan Rd (Singalized Intersection)

(6) STUDY AREA TYPE: Urban: x Rural: _____

(7) ANALYSIS PERIODS AND TIMES:

AM Peak hour 7:00 AM - 09:00 AM
PM Peak hour 4:00 PM - 06:00 PM

(8) TRAFFIC ADJUSTMENT FACTORS:

(a) Seasonal Adjustment:	<u>To be determined upon coordination</u>	
(b) Annual Base Traffic Growth:	<u>See Table 2</u>	Source: Approximate Growth average from AADT's GDOT Traffic Count Data online

(9) OTHER PROJECTS WITHIN STUDY AREA TO BE ADDED TO BASE TRAFFIC:

To be determined upon coordination

(10) APPROVAL OF DATA COLLECTION ELEMENTS AND METHODOLOGIES:

<u>Proposed Location</u>	<u>Period (Avg Day)</u>	<u>Type</u>
-Hugh Howell Rd and Rosser Terrace	AM/PM	Turning Movement Counts
-Hugh Howell Rd and Tucker Industrial Rd	AM/PM	Turning Movement Counts
-Hugh Howell Rd and Cowan Rd	AM/PM	Turning Movement Counts

(11) CAPACITY/LOS ANALYSIS

<u>Location</u>	<u>Period (Avg Day)</u>	<u>Type</u>
-Hugh Howell Rd and Rosser Terrace	AM/PM	Synchro (HCS)
-Hugh Howell Rd and Tucker Industrial Rd	AM/PM	Synchro (HCS)
-Hugh Howell Rd and Cowan Rd	AM/PM	Synchro (HCS)

(12) ROADWAY IMPROVEMENTS/MODIFICATIONS BY OTHERS TO BE INCLUDED:

To be determine upon coordination

(13) OTHER NEEDED ANALYSES:

- (a) Signal Warrant Analysis:
No
- (b) Required Signal Phasing/Timing Modifications:
TBD
- (c) Analysis of the Need for Turning Lanes:
-Hugh Howell Rd and Rosser Terrace (Unsignalized Intersection)
- (d) Turning Lane Lengths:
95th Percentile Synchro Queue

(14) ADDITIONAL COMMENTS OR RECOMMENDATIONS RELATIVE TO THE SCOPE OF THIS PROJECT:

**TRAFFIC IMPACT STUDY
SCOPING/METHODOLOGY STATEMENT**

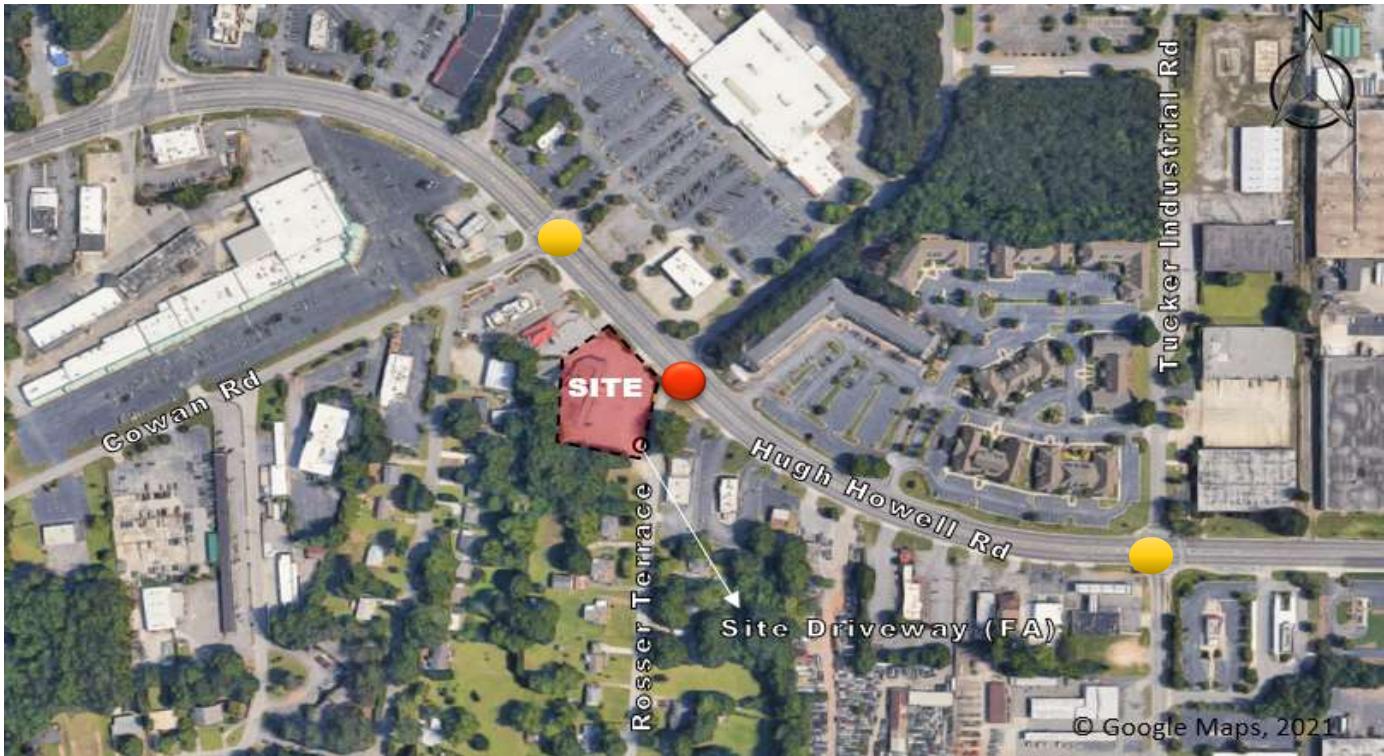

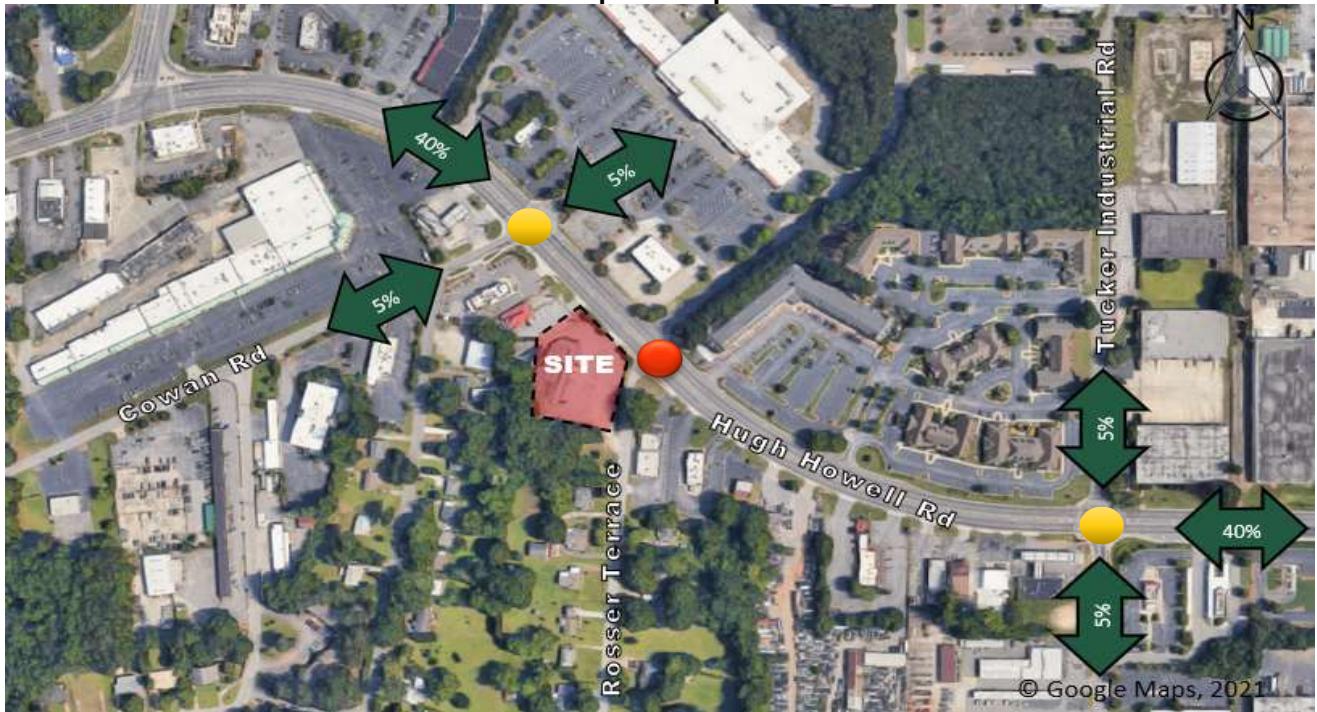

FIGURE 2 Proposed trip distribution

Good Afternoon Ken,

We received some trip generation information today of some CFA locations in the Great Atlanta area, average weekday (M-Th) information from 2 months in 2019 and February 2021 when school was in session. The locations are the following:

- 1- 2580 Piedmont Rd
- 2- 2340 N Druid Hills Rd
- 3- 1100 Northside Dr

Sincerely,

DANIELA JURADO

Subject: [External]RE: Chick-fil-A Tucker Methodology Coordination

Good Morning Ken,

Would it be possible for us to use the ITE mean values plus one standard deviation. That would leave the following trip generation:

Mean

Land Use	Land Use Code ⁽¹⁾	Size	Daily Trips	Period	Peak Hour Trips			Pass by ⁽²⁾		
					In	Out	Total	In	Out	Total
Fast Food restaurant with Drive thru	934	4,989	1893	AM	103	98	201	50	48	98
				PM	85	78	163	42	36	80

(1) Based on the Institute of Transportation Engineers Trip Generation, 10th Edition

(1) Pass-By rates of 49% were extracted from the Institute of Transportation Engineers Trip Generation Handbook, 3rd Edition

Mean +1 std dev

Land Use	Land Use Code ⁽¹⁾	Size	Daily Trips	Period	Peak Hour Trips			Pass by ⁽²⁾		
					In	Out	Total	In	Out	Total
Fast Food restaurant with Drive thru	934	4,989	1893	AM	175	169	344	86	83	169
				PM	131	121	252	64	59	123

(1) Based on the Institute of Transportation Engineers Trip Generation, 10th Edition

(1) Pass-By rates of 49% were extracted from the Institute of Transportation Engineers Trip Generation Handbook, 3rd Edition

Would you agree with this approach?

Thank you,

DANIELA JURADO

Rodrigo,

A Chick fil-A restaurant is rather unique and does not fit in the mold of Code 934 for a Fast Food Restaurant. Actual trip generation will be significantly higher. A more accurate estimate would be to provide counts at an existing comparably sized Chick fil-A.

You can call me at the number below with any questions.

Good Morning Ken, Courtney, and Kylie,

I am contacting you regarding a Chick-fil-A project at 4431 Hugh Howell Rd, Tucker, GA. The site will be replacing the existing Presbyterian Church. Attached you will find a Methodology Statement with the Trip Generation for this site and a Current Site Plan.

We want to schedule a meeting with the City of Tucker to verify that our methodology for this Traffic Impact Study is acceptable. Could you reply to this email with the best time for you to discuss this project?

Thank you in advance.

Sincerely,

RODRIGO MEIRELLES VAN VLIET

That will work, thank you very much Renaldo. Can you please include Daniela Jurado (djurado@bowman.com) and Andrew Petersen (apetersen@bowman.com) to the meeting invite as well?

Sincerely,

RODRIGO MEIRELLES VAN VLIET

Hello Renaldo,

Sorry for misspelling your name at first. Either one of these days will work for us. Let us know what time works best for you and your manager.

Thank you,

RODRIGO MEIRELLES VAN VLIET

Good morning Rodrigo,

I can set a meeting for sometime early next week if that works for you. I'm going to speak with my manager to see what times work best based on the day you prefer. I'm thinking sometime Monday or Tuesday. How does these dates sound to you?

Thanks,

Renaldo M. Mathis

Good Morning Ronaldo,

I wanted to follow up on my previous email and see if you received my previous email with the attached methodology for this project, and if there is any additional information you require for the TIA of this project.

Please do not hesitate to contact us.

Thank you in advance,

RODRIGO MEIRELLES VAN VLIET

Subject: Chick-fil-A Tucker Methodology Coordination - GDOT

Good Morning Ronaldo,

I am contacting you regarding a Chick-fil-A project at 4431 Hugh Howell Rd, Tucker, GA. The site will be replacing the existing Presbyterian Church. Attached you will find a Methodology Statement with the Trip Generation for this site and the most recent Site Plan.

We want to schedule a meeting with the GDOT to verify that our methodology for this Traffic Impact Study is acceptable. Could you reply to this email with the best time for you to discuss this project?

Thank you in advance.

Sincerely,

RODRIGO MEIRELLES VAN VLIET

APPENDIX E

Memorandum

To: Chick-fil-A, Inc.

From: Andrew J. Petersen, P.E. - Director
Daniela Jurado – Analyst
Rodrigo Meirelles -Analyst

Date: 06/18/2021

Re: Chick-Fil-A – Trip Generation Memorandum

Bowman Consulting has been retained by Chick-fil-A, Inc. to perform a Trip Generation at three fully operational Chick-Fil-A (CFA) Restaurants to determine the expected morning and evening peak hour trip generation rates for this facilities.

The purposes of the trip generation and stacking assessment are as follows:

- Determine the appropriate independent variable to assess the applicable CFA trip generation rates.
- Determine the expected trip generation rates for the CFA based on data collected from three existing CFA Sites.
- Determine if the Institute of Transportation Engineers (ITE) trip generation rates are consistent with calculated expected number of vehicular trips on the proposed CFA.
- Select the appropriate trip generation rates for the proposed CFA.

Selected Sites

For the preparation of this assessment, three Chick-Fil-A sites have been evaluated. The following criteria has been considered for the site selection:

- Type of Facility (Chick-Fil-A Restaurant)
- Operation (Drive-thru and Indoor sitting)
- Location of the facilities

The following sites were selected for the data collection.

Location 1	<ul style="list-style-type: none">• Chick-Fil A Piedmont• Address: 2580 Piedmont Rd NE, Atlanta, GA 30324• Surveyed Site Intensity: 5,200 SF• AADT of Adjacent Street: 44,100
Location 2	<ul style="list-style-type: none">• Chick-Fil A Druid Hills• Address: 2340 N Druid Hills Rd NE, Atlanta, GA 30329• Surveyed Site Intensity: 4,550 SF• AADT of Adjacent Street: 56,300

Location 3

- **Chick-Fil A Northside Dr**
- **Address:** 1100 Northside Dr NW, Atlanta, GA 30318
- **Surveyed Site Intensity:** 4,450SF
- **AADT of Adjacent Street:** 30,300

Study Methodology

The study was based on average weekday entering/exiting volumes at each one of the selected Chick-Fil-A locations provided by the Atlanta Department of Transportation. The information corresponds to the average weekday data from two months in 2019 and February 2021 while school was in session.

The procedures and evaluation for this assessment are in accordance with the Institute of Traffic Engineers (ITE) Trip Generation Manual Handbook, 3rd Edition. The ITE is the leading resource for such data and provides traffic and parking related data for numerous land use and building types. Additionally, ITE provides trip and parking generation procedures to determine site specific trip and parking generation rates.

Data Collection

For the purposes of this study the following data was collected:

- Site specific data for existing Chick Fil A sites: Square Footage and location.
- Published GDOT AADT counts.
- ITE Trip Generation information and variables.
- Average trips generated by the surveyed Chick Fil A sites provided by the Atlanta Department of Transportation, see **Attachment A**.

Trip Generation Data

Table 1 displays the trip generation data collected on the three existing sites.

Table 1. Collected Trip Generation Data

Facility	Location	Square Footage	Adjacent Street ADTs	Time	In	Out	Total
CFA	2580 Piedmont Rd NE, Atlanta, GA 30324	5,200	44,100	AM	221	221	442
				PM	202	202	404
CFA	2340 N Druid Hills Rd NE Atlanta, GA 30329	4,550	56,300	AM	184	248	432
				Noon	306	412	718
				PM	192	308	500
CFA	1100 Northside Dr NW Atlanta, GA 30318	4,450	30,300	AM	262	262	524
				Noon	263	263	526
				PM	164	164	328

To assess the trip generation rates for the Chick-Fil-A two independent variables were evaluated: Gross Floor Area (GFA), AADT Adjacent Street.

To select the independent variables, the best fitted curve models were evaluated based on the conceptual validity of signs of the equations and goodness of fit. The results of these evaluation are presented in **Table 2**.

Table 2. Trip Generation Model evaluation

Model	Independent Variable	Equation	R ²	Signs Conceptually Valid	Acceptable Goodness of FIT
AM Models	1,000 SF GFA	$y = -64.523x + 771.41$	0.271	No	No
	AADT of Adjacent Street	$y = -0.0036x + 622.44$	0.8563	No	Yes
PM Models	1,000 SF GFA	$y = 11.859x + 354.53$	0.0031	Yes	No
	AADT of Adjacent Street	$y = 0.0066x + 123.51$	0.9895	Yes	Yes

Models containing the GFA variable were found to be not conceptually valid, with equations that reflect an inverse relationship between the GFA and the number of trips generated by the site and unacceptable goodness of fit.

Models using AADT of Adjacent Street as independent variable show acceptable goodness of fit. However, the AM model Based on AADT of adjacent street shows signs non conceptually valid, therefore, the weighted average was evaluated for this time period.

Based on the results presented in **Table 2** the Adjacent Street Traffic was selected as independent variable for both the morning and evening peak hours.

Following the procedures presented on the ITE *trip generation Handbook*, Chapter 9 and Appendix J, the use of the weighted average rate for the Morning peak was validated by comparing the weighted standard deviation with the weighted Average trip rate. **Table 3** presents the validation for the use of weighted average for the morning peak hour trip rate.

Table 3. Validation of AM Weighted average trip generation

Location	AADT of adjacent Street	Peak Hour AM	Trip rate	Value	Value Squared	weight	Value Squared *weight
2580 Piedmont Rd	44,100	442	0.01002	0.00	0.0000005	0.34	0.00000015
2340 N Druid Hills Rd	56,300	432	0.00767	0.00	0.0000091	0.43	0.00000394
1100 Northside Dr	30,300	524	0.01729	0.01	0.0000435	0.23	0.00001009
Total	130,700.00	1,398.00	0.01070	-	Variance		0.00001418
					Weighted Sample Variance		0.00001773
					Weighted Std Dev		0.00
					Percentage of W StdDev		39%
					Acceptable (less than 55% Trip Rate)		Yes

As presented in **Table 3** the standard deviation of the data falls in the allowable 55% threshold according to the procedures presented on the ITE trip generation Handbook, Chapter 9 and Appendix J, therefore, the use of weighted average trip generation rate is acceptable.

The selected trip generation equations for CFA facilities are presented in **Table 4**.

Table 4. Trip Generation equations for CFA facilities

Model	Independent Variable	Equation
AM	AADT of Adjacent Street	Total AM CFA trips = 0.0107 x AADT of Adjacent Street
PM	AADT of Adjacent Street	Total PM CFA trips = 0.0066 x AADT of Adjacent Street + 123.51

The evening peak hour model is the resulting fitted curve with AADT of adjacent street as independent variable. The trip generation rate for the morning peak hour is 0.0107 trips/AADT of Adjacent Street Traffic.

Conclusions and Recommendations

- Both, the morning and evening models containing the GFA variable were found to have unacceptable goodness of fit, the morning models is not conceptually valid, with an

equation that reflects an inverse relationship between the GFA, and the number of trips generated by the site.

- Models using AADT of Adjacent Street as independent variable show acceptable goodness of fit.
- The evening peak hour model is fitted curve with AADT of adjacent street as independent variable.
- The AM model Based on AADT of adjacent street shows signs non conceptually valid therefore, the weighted average was evaluated for this time period.
- The evaluation of the data for the morning peak hour shows that the standard deviation of the data falls in the allowable 55% threshold according to the procedures presented on the ITE trip generation Handbook, Chapter 9 and Appendix J, therefore, the use of weighted average trip generation rate is acceptable.
- The trip generation rate for the morning peak hour is 0.0107 trips/AADT of Adjacent Street Traffic.

Good Morning Chris,

Would it be possible to also pull out the Turning movements for Cheshire Bridge at I-85 ramps for the am noon and pm?

Thank you,

DANIELA JURADO

Thank you for the information. We would like to have the information for the following sites:

Location	AADT
1100 Northside Dr NW	30,300
4340 Hugh Howell Rd, Tucker, GA 30084	25,300

The reason is, we also want to evaluate the trip generation based on the AADT of adjacent street.

Thank you in advance.

Sincerely,

DANIELA JURADO

Subject: [EXTERNAL] RE: Traffic Impact Study Methodology Chick-Fil-A Cheshire Bridge Rd & Sheridan Rd

I think it depends on the site characteristics if the Miami site is similar.

I used our StreetLight Data Insight platform access to look at the number of trips entering two Chick-fil-A locations in Atlanta. This is average weekday (M-Th) information from 2 months in 2019 and February 2021 when school was in session. The 1 standard deviation from the ITE land use code trip generation seems too low for an accurate assessment of site impact. If you have a specific site location in Atlanta that you think will be more representative of the conditions for the proposed site at Cheshire Bridge and Sheridan Rd, let me know and I can pull data for those locations.

2580 Piedmont Rd

- AM Peak – 221 trips in, assume 221 trips out – 442 total trips
- Noon Peak – 332 trips in, assume 332 trips out – 664 total trips
- PM Peak – 202 trips in, assume 202 trips out – 404 total trips

2340 N Druid Hills Rd

- AM Peak – 184 trips in, 248 trips out – 432 total trips
- Noon Peak – 306 trips in, 412 trips out – 718 total trips
- PM Peak – 192 trips in, 308 trips out – 500 total trips

Intersection Summary

Cycle Length: 160

Actuated Cycle Length: 160

Offset: 118.6 (74%), Referenced to phase 2:WBT and 6:EBT, Start of Yellow

Natural Cycle: 80

Control Type: Actuated-Coordinated

Maximum v/c Ratio: 0.89

Intersection Signal Delay: 18.4

Intersection LOS: B

Intersection Capacity Utilization 68.5%

ICU Level of Service C

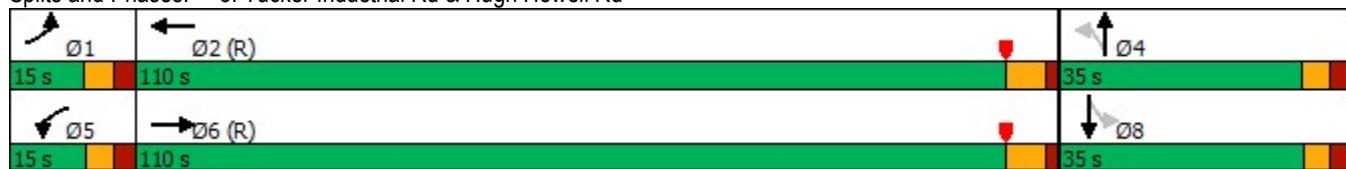

Analysis Period (min) 15

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 3: Tucker Industrial Rd & Hugh Howell Rd
